MOIA
SOCIAL MOVEMENT

Junior Android Developer (m/f/d) for our Android Passenger App Team

VOLLZEIT   Hamburg, Deutschland   Ohne Berufserfahrung   12.07.19

We want to hire Android Developers (m/f/d) who are passionate and experienced to build excellent and reliable solutions.

MOIA is an innovative mobility company that will change people's lives by re-imagining urban mobility. MOIA will create services that enable more people to move more freely and securely, ultimately making cities better places to live. We will free up the movement of people and goods within cities whilst making mobility accessible to everyone. That means we will:

- Make city traffic clean, safe and silent
- Create more time and space for people
- Bring affordable and convenient mobility to everybody

We would be delighted if you were to accompany us on this exciting and challenging journey. We are not only looking for candidates to fill our job vacancies; we want you as a crucial part of our team. Our core competence is passion.

MOIA is for the people

That's why we need great people who are:

- Bright minds, but humble
- Chatty, but also know when to be calm and just say what's really needed
- Mindful about their team, but know how to bring their own point across as well
- Questioning the status quo, but keeping focus
- Striving for improvement of others and themselves
- Pushing for progress without leaving the team behind

We are deeply invested in Android technologies

So when Nougat, Oreo & Pie are not just sweets for you, but constant companions in your recent years, then check these things as well, you:

- know your Git and some first Gradle
- speak English, Java or Kotlin (and ideally German as well)
- have a degree in Computer Science and some first 3 years of programming experience
- are enthusiastic about the latest things Android (Foldables? sure!)
- don't fear to interact with fellow Developers, Product Owners, Designers and other Stakeholders
- like to share your knowledge (Android Meetups or Droidcons anyone?)
- care about a well maintained, scalable and tested codebase (if not yet, we will make you do ;))
- have a certain eye for product- and UI-quality as well
- gained some first experience with the Android SDK and AndroidX/Jetpack
- are willing to learn the ins & outs of Android application development

What you will do

Our Passenger domain has the goal to provide the best ride-sharing app on the market.

- You will work in a bottom-up managed, autonomous, cross-functional team, that will continuously test new ideas and evaluate their potential.
- You and your team will work like a startup and take ownership of the whole development cycle - from ideation over design to implementation, quality assurance and maintenance.
- Build cutting edge solutions, using the latest technologies and features the Android platform has to offer.
- The software you will be working on is the number one interface our customers are interacting with and plays a big part in defining the MOIA user experience.

What we offer you

We are a new company and a fast-growing team. We see things from a people perspective, observing, learning and responding to their social needs. We are always curious to find better ways to do things and so we question everything. We are driven by the possibilities better urban mobility solutions can unlock. We work with different people, disciplines and companies to make great things happen. MOIA offers a unique opportunity as it combines the best of the startup and corporate worlds. We are an innovative new business based in top locations such as Berlin and Hamburg, but are also backed by a large corporate parent providing funding, resources, know-how and commitment.

What we offer in detail:

- Competitive salary and bonus
- Mobility budget and Job Ticket (public transport)
- Subsidisation of a fitness club membership
- 30 days holiday
- Company phone (+ SIM card)
- Up to date work hardware
- Relocation support

Our work is dedicated to transforming the lives of billions – you will be part of this vision.

So, grab your Jetpack and let's have an instant Pie!
